KELLY'S BULK GARDEN SEED

With the resurgence in home gardening, Kelly's bulk seed has become more popular than ever. Bulk seed is just a fraction of the price of packaged seed, and Kelly's has a large selection from which to choose. Many varieties are also heirloom and ALL our garden seed is Non-GMO.

KELLY'S ATHLETIC MIXTURE

This is our most popular turf grass mixture because it can be used almost anywhere! It tolerates both sun and shade and it has a root system that goes down about 12 inches, making it extremely drought tolerant!

THE SEEDY SIDE

“Animal pollinators are needed for the reproduction of 90% of flowering plants and one third of human food crops. Pollinators include bees, butterflies, moths, beetles, flies, birds, and bats. Each of us depends on pollinators in a practical way to provide us with the wide range of foods we eat. In addition, pollinators are part of the intricate web that supports the biological diversity in natural ecosystems that help sustain our quality of life. Abundant and healthy populations of pollinators can improve fruit set and quality, and increase fruit size. In farming situations this increases production per acre. In the wild, biodiversity increases and wildlife food sources increase.” (USDA NRCS)

At Kelly's, we have been working closely with the NRCS and agricultural producers to provide pollinator seed for CP42 and other required plantings. This provides habitat for animal pollinators that are in an alarming rate of decline due to the eradication of certain species of plants that are imperative for their survival.

Kelly's is your “go to” place for small seeds. Whether it's alfalfas, clovers, pasture mixes, waterway mixes, lawn mixes, food plot mixes, pollinator mixes, or bulk garden seed, Kelly's has the seeds you need for your application.

Quality has and always will be our only consideration when it comes to procuring seed. Order today and buy with confidence!

COVER CROPS

Cover Crops provide species and mixes that improve soil tilth, increase crop yields, break disease and pest cycles, reduce soil erosion, increase water infiltration, and recycle valuable nutrients.

ECO-TILL RADISH has an extra-large root system that allows it to pull nitrogen and other nutrients from deep within the soil and bring them back to the surface. Upon decomposition, the N and other nutrients become available to the next crop. **ECO-TILL** radish reduces soil compaction, increases soil organic matter, improves soil tilth and also enhances soil aeration. **6-10 lbs./Acre**

FRIA ANNUAL RYEGRASS is a late maturing, widely adapted diploid annual ryegrass with exceptional cold tolerance. Other benefits include improved disease resistance to crown rust, gray leaf spots, and helminthosporium leaf spot. **FRIA** provides excellent root penetration and erosion control. **15-20 lbs./Acre**
